Protecting Our Future: The Adaptation Benefits of Investing in Resilient Health & Immunisation Systems in Developing Countries

Join a high-level panel discussion exploring how investments in health and immunisation systems in low- and lower-middle-income countries serve as pivotal climate adaptation solutions. This session will conclude with the launch of the joint Gavi–AIIB–Rockefeller report titled “**Protecting Our Future: An Investment Framework for Quantifying the Climate Adaptation Benefits of Health and Immunisation Investments**”, highlighting some of the report’s findings.

Panelists representing multilateral development banks, global health institutions and government organizations will discuss key opportunities and challenges in increasing adaptation benefits in health sector, including how resilient health infrastructure and immunisation against climate-sensitive diseases are “best buys” in adaptation finance.

Whether you’re in climate finance, health systems investment, donor coordination or policymaking, this event aims to initiate dialogue among the climate financing community on the importance of investing in health systems as a critical component of climate adaptation and resilience.
